RESTORE POWER.
PROTECT SEALS.
THE ULTIMATE ENGINE DETOX.

Introducing the next generation of engine cleaning technology.

DTOX MAXFLUSH SEAL-SAFE

Stop risking your engine's internal seals with harsh, old-school chemical solvents. DTOX MaxFlush is engineered to safely dissolve baked-on carbon, clear sticky sludge from piston rings, and restore lost compression—without the collateral damage.

WHY MAXFLUSH OUTPERFORMS TRADITIONAL FLUSHES:

Zero-Aromatic Mild Solvent:

We utilize Isopar™M, a high purity synthetic isoparaffinic hydrocarbon fluid. With an ultra-low aromatic content of maximum 0.05%, it delivers clinical cleaning power.

Protects Viton & Nitrile Seals:

The clear, colourless liquid base is non-aggressive. It will not swell, dry out, or crack aging elastomeric gaskets and valve stem seals.

Fortified with ZDDP Anti-Wear:

Unlike standard flushes that strip the engine dry, our formula is loaded with a sacrificial zinc anti-wear barrier to protect bearings and moving parts during the flush cycle.

Environmentally Conscious:

The premium synthetic base fluid is readily biodegradable.

THE PROFESSIONAL WORKSHOP CHOICE

Safe for all petrol and diesel engines. For optimal performance, use before every oil change.

Dealers & Workshops:
